I velcroed the controller to the battery to make it removable from the car to operate. Maybe its overkill to use that ESC but thats what I got in my leftover pile. Im pretty happy how it turned out. Before powered from 5,2V out of the BEC it couldnt even pulle the front wheels off the ground, now it pulls the whole 9lbs truck off the ground. I found several really small ESC on ebay which can handle 3S lipo. Maybe its overkill to use that ESC but thats what I got in my leftover pile. I found several really small ESC on ebay which can handle 3S lipo. Has your 3s damaged that winch yet. Im in the same position. BTW the instructions for the Winch say 6cell 7.2V, not 6V. So a BEC at 7.4V shouldnt be a problem since a fully charged 6cell pack will actually be higher than that. One or the other is enough. Thats the way the Winch controller comes wired from 3R. I wont hurt having it connected. Just trying to give a little info. L8R, RonWild Snapper Scale Accessories 6 12032009 0638 PM a few qs on ESC and wiring motor. numbers. <http://pierreseche.fr/userfiles/daihatsu-feroza-workshop-manual-free.xml>

All products include the Finnish VAT 24 %. Prices are subject to change without prior notice. During the day our customer service is usually really fast and in the evening we are little slower due we have less people to answer questions. Easier things are usually handled within the hour and shipping related things we try to handle during the day so they can be shipped out the same day. Our goal is to answer all emails within 24h no matter how difficult the question is. The fastest way to get customer service is always to send us a email. Please include relevant pictures and a structured email with proper sentences so we can answer you faster. Take your time and read trough your email once before you send it to us. And many other countries, just go to the checkout and see if you can checkout. If not just let us know and we will quote you a price as we are able to ship to any country in the world. You can however browse the shop in other currency but the price then is not final. You will see the final Euro price in your shopping basket when paying for the product. The price is shown in "5. Send Order" part of the checkout form. You can change the destination from top of the homepage and Checkout pages before you order. To more distant European countries the international parcel dispatch takes between three and six working days, to remote areas up to eight days. Rough estimate is 1 week from order to delivery. Note! Here you can find estimated delivery times. Note! Here you can find collected statistics about average delivery times. The Courier will deliver the parcel to your door. But they also have pickup points where they might drop your package off so you can pick it up when it suits you. The customer is responsible for any return costs unless otherwise agreed to with our customer service. We try to return the money with the same payment method that was used to pay for the order, if its not possible we make a wiretransfer.

You can also request a gift card if you are making a new order to speed up the process. Please contact our customer service for details. Depending on the item this will take 13 days after we have received the item. If there is a delay we will contact you. Handling fee will be reduced from the total refund. Also notify the courier bringing you the shipment that it has been damaged. Most items do not have a warranty as they will break in normal usage. For example if you hit something solid or take a larger tumble. Properly used items should easily last 312 months and during this period we are able to replace broken items if they have a manufacturing or material fault. We have years of experience with different makes and they all have different warranty policies. We have chosen to work with brands that have a good understanding how to serve their customers and you can be assured that you will get the best customer experience possible with us. But we do help and teach you how to do things properly so you do not break anything in the future, just email us and we will help you out. We are however unable to wrench for you, its part of the hobby so its important that you will learn that part also your self, we have great tools to sell you so just ask us what you need. Note! Many manufacturers are strickt that electronics are not allowed to be modified connectors changed etc. without disabling the warranty. Remember to check this from your products manual. Most of our customers feel that they get excellent service in the rare occurrence that they encounter a problem with the product they have bought. We are here to help and we do our best to sort it out as soon as possible. We do however try to minimize the effect on the customer. Please contact us immediatly if we have made an error and we will make it right. Its very important that we can tell you how to mark the parcel so it will be processed in a timely fashion.

Exceptions to this are preorders and possible, but unlikely, errors in stock numbers. Pinterest Explore Log in Sign up Privacy. Lieblingsfahrzeug entdeckt. In der Welt der RC Cars kann jeder das Fahrzeug fahren, dass er schon immer wollte. Und je nach Fahrzeugtyp kann auch dort gefahren werden, wo man will Strae, Parkplatz, Strand, Gebirge, Wald, Pflutzen. Hier darf es laut

sein, der Dreck einem um die Ohren fliegen und die Luft nach Staub schmecken. Oder soll es eher das Kontrastprogramm sein. Das Schrauben in der heimischen Werkstatt, die ersten Fahrversuche mit den eigenen Kindern, der Austausch zwischen der Community und neue Orte und Techniken kennenlernen. Mit einem RC Car ist alles möglich. Es ist eine ganz eigene Mentalität und das Gefühl mit seinem Traumwagen zufahren, ohne selbst am Steuer zu sitzen oder gleich ein eigenes Parkhaus für all seine Lieblinge zu besitzen. Und davon gibt es so einige.

Hier stellen wir unser Sortiment vor, die einzelnen Kategorien und Filter Dreckig oder sauber. Die Frage nach dem richtigen Antrieb muss jeder für sich entscheiden, wir bieten beide Varianten an den Verbrenner und den Elektromotor. Verbrenner Je nach Größe des Fahrzeugs werden sie mit unterschiedlichen Mischverhältnissen, meist aus Nitromethan, Ethanol und Synthetikal, betrieben. Ihre Handhabung ist etwas anspruchsvoller, sie sind laut und verdammt schnell. Elektronik Elektroautos sind hingegen günstiger in der Anschaffung und im Unterhalt, außerdem leiser und umweltfreundlicher, da die Abgase entfallen. In unserem Shop haben wir sie darüber hinaus noch in Crawler, Drifter und Classics unterteilt. Offroad Die Offroad Cars sind gemacht für die unterschiedlichsten Gelandetypen. Von Wald, Strand, Straße bis Geröll ist alles dabei. Ihre Reifen sind breit, die Profile tief und die Stodämpfer ausgestattet. Onroad Hierunter fallen alle Fahrzeuge, die eher für die Straße, Parkplatz oder RCHallen bestimmt sind. Sie haben eine geringe Bodenhöhe, schmale Reifen und ihre Karosserien sind weniger widerstandsfähig, im Gegensatz zu den Offroad Modellen. Crawler Crawler zählen zu den Offroad Cars und machen vor kaum einer Steigung halt und können geschickt über Hindernisse wie Steine fahren. Hier zählt Drehmoment und maximale Achsverdrängung. Nicht die Geschwindigkeit. Drifter Die anspruchsvolle Fahrtechnik des Driftens spiegelt sich in einer ganz eigenen Fahrzeugklasse wieder. Hier geht es um ein perfektes Zusammenspiel von Untergrund und Reifen, um die besten Ergebnisse zu erreichen. Die Kunst besteht darin, das Fahrzeug im perfekten Driftwinkel durch die Kurve zu jagen. Classics Die Kategorie für alle Nostalgie Fans. Wir bieten hierunter allerhand Fahrzeuge an, die eine Wiederauflage erhalten haben und die die RC Car Geschichte der 70er, 80er, und 90er Jahre neu aufleben lassen. Ganz gleich zu welcher Gruppe man sich zählt, wir haben für jeden das richtige Fahrzeug.

Bausätze Bei den Kits muss das Fahrzeug noch von Hand zusammengebaut werden. Alle Einzelteile und eine Anleitung liegen dem Paket bei. Jedoch müssen meist noch Empfänger, Servo, Motor, Regler, Akku und Ladegerät bzw. Ein Blick vorab in die Bausätze lohnt sich, denn einige Marken wie Tamiya legen bereits einzelne Zusatzteile mit bei. Aber auch sonst, kann man sich bei Tamico alle benötigten Teile hinzukaufen. Ebenfalls findet sich die Bezeichnung RTD Ready to drive an einigen Modellen, welche dieselbe Bedeutung hat. Das Fahrzeug ist hierbei fertig aufgebaut und man benötigt nur noch wenige Handgriffe, um loszufahren. Wie bei den Bausätzen lohnt sich aber auch hier ein Blick in die Boxen, denn je nach Hersteller können Akku und Ladegerät bereits enthalten sein. Häufig fehlt noch Elektronik. Lackierung und Zusammenbau ist aber bereits erfolgt. Darunter die absoluten TopMarken aus dem RC Car Bereich, wie Tamiya, Kyosho, Traxxas, Arrma, Axial, MST, Carson und Absima. Zudem umfasst unser Sortiment zahlreiche Hersteller von Tuning und Ersatzteilen, wie MST, RC4WD, HPI und viele weitere. It may not display this or other websites correctly. Thanks in advance. I found it is even easier than I thought it was, so this email may work instead. It is NOT as difficult as this step by step format makes it look. Any time you RX is on without a TX on you should unplug your motor or take the pinion off just to be safe. 2. Press and hold the top ch3 button and turn on the TX like the manual says. 3. Wait for it to flash 4 time fast the manual says five but the two samples I have flash 4 let go of the button. 4. Now push and HOLD the top or bottom button. You should see the servo start to move one way or the other depending on were its starting position is. 5.

When the servo gets to the position you want it to be in let of the button and turn the wheel to the right. The power LED will flash to let you know that position has been set. 6. Now press and hold the top or bottom button so the servo starts to rotate again, when it reaches the next point you want turn the wheel to the right. 7. Do this again for the 3 and if you need it 4th position. 8. If this works like it should just turn of the tx once you have got the LED flash for the last position you wanted. If this does not work there is something wrong. I found two RX and two TX samples and this did the trick on any combination I found. Let me know. Since I do not work in product support I am not at my desk with any regular schedual but I only work till 500 so phone contact is gonna be tough, but I think this should get you going so we should not need to worry about that. How To Guide Date I chose 10 of the 16 pictures I had that I thought most clearly demonstrated the steps involved. However, I would be happy to clarify anything thats not clear in my description or pics. This will be the part of the plate thats closest to the back of the truck. Its still very rigid this way. 4 Using the front support see manual or pics as a guide for a third center screw closer to the front of the truck while the plate is installed and held in the proper position by the first two screws, mark and drill a third hole in the plate. 5 Mark and drill the four

holes for the winch which should be positioned on the opposite side furthest away from the three screw holes that will be mounted to the chassis. If your plate is square and true and your holes are properly positioned, centering the winch from side to side on the front edge of the plate should center it within the bull bar or bumper once its installed. Then, using small fine pitch screws I had spares from the truck build, attach the mounting plate to the chassis. This makes it bullet proof. You can also narrow the plate itself by actually cutting some material away in the area but that will interrupt the solid rolled edge and reduce rigidity which is why I didnt do that. If you choose to do it that way, youll need to make sure you roll the edges to add as much rigidity as possible. If not you run the risk of the plate bending up or down during heavy winching but the degree to which that may happen depends on what material you used to make the plate. 7 Replace the bull bar or whatever you might have on the front of your truck, complete the wiring hookup per the supplied instructions and winch away!

NOTE Depending on the final position of the winch, you will most likely have to notch out a portion of the lower front plastic bumper in order for it to clear the winch with the body on. I have mine located as far forward as possible and still had to cut out a substantial section of the bumper but its not a big deal since it looks very clean with the body back on. Just take your time cutting and fitting until you get a clean, tight fit of the cut bumper around the winch. Because this method of installing the winch allows you to tie the mounting plate directly into the chassis at three different points, its as strong if not stronger than anything on the truck so there is no worry of movement or breakage during heavy winching. You can check out pics of my F350 if you want to see some more detail as I posted some updated photos of my progress. I hope this helps somebody out there. Thanks for looking.
